Name : SAMUVEL P

Reg.no: 192511280

## EXP 14 : Create a Virtual Hard Disk and allocate the storage using VM ware Workstation.

### Aim:

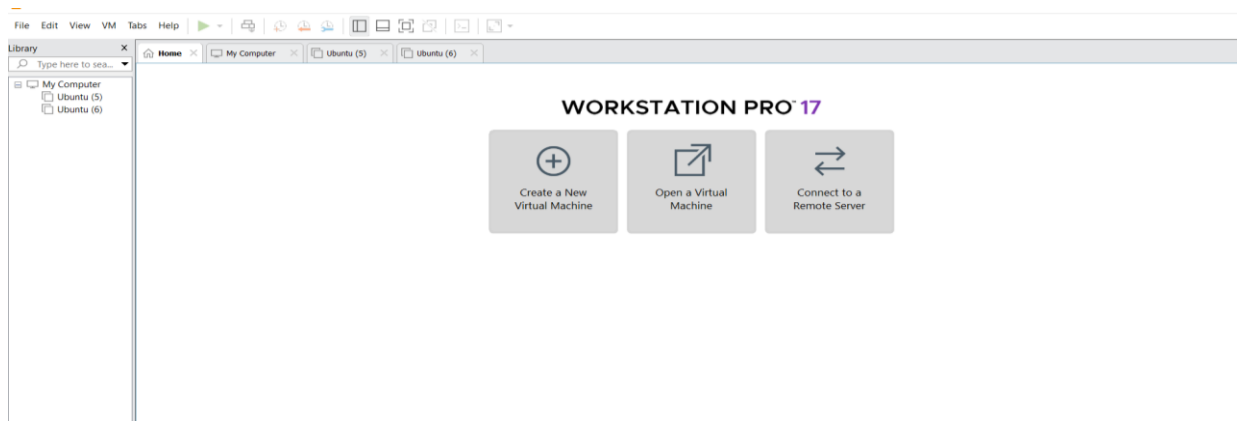

To Create a Virtual Hard Disk and allocate the storage using VM ware Workstation.

### Steps:

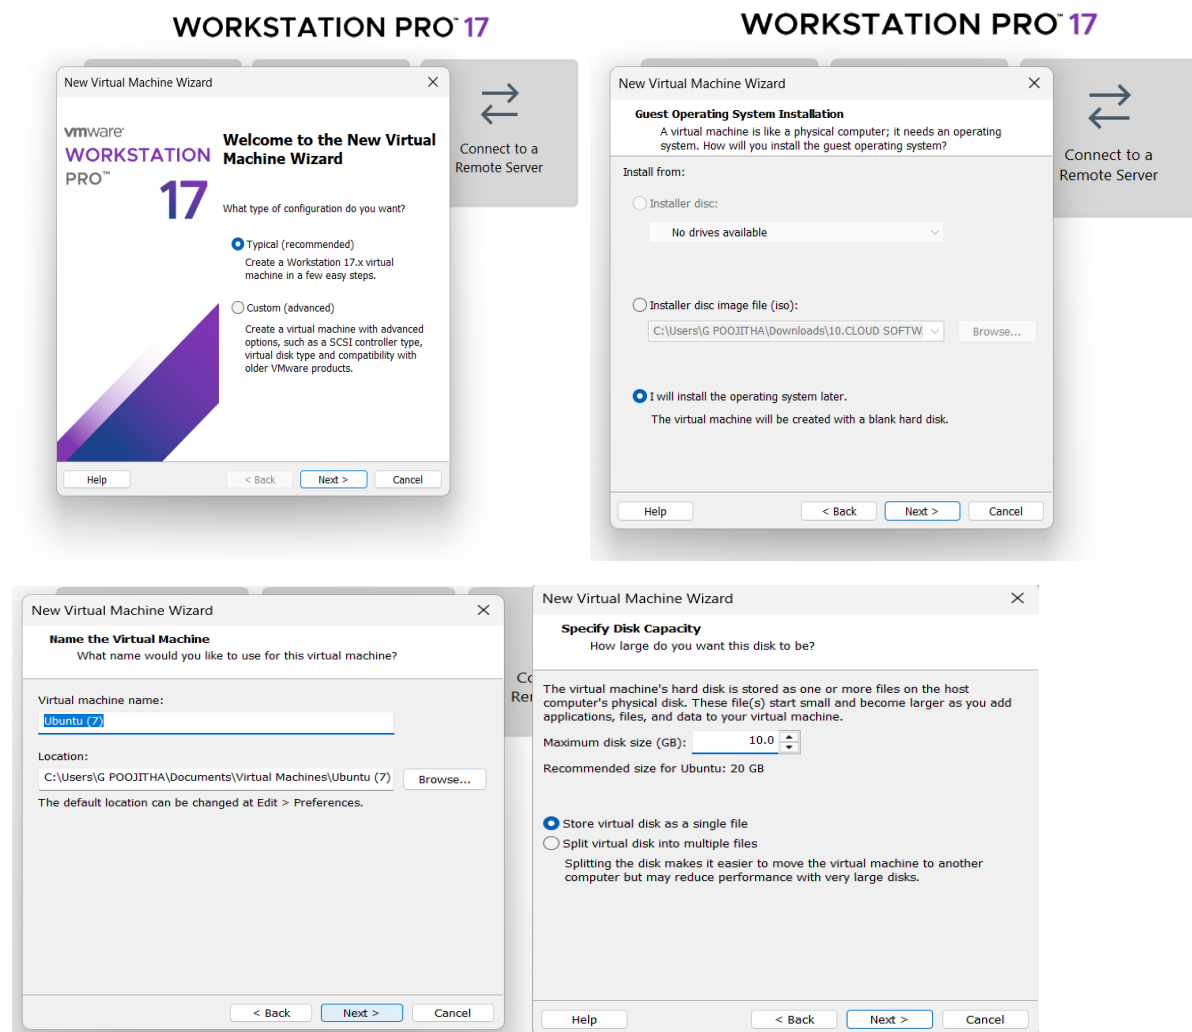

1. Download VMware software and install it as Type-2 Hypervisor.
2. Download Ubuntu or tiny os as ISO image file.
3. In VMware workstation → Create new VM
4. Do the configuration based on given conditions.
  - a. Add extra Hard disk and allocate Storage to it .
5. Created a virtual Machine .
6. Launch the VM.

### Implementation:

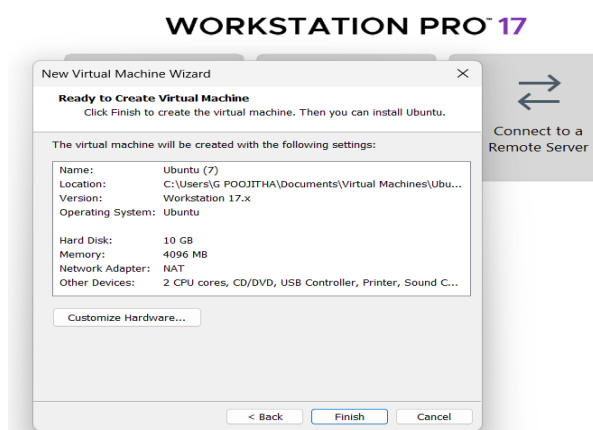

#### 1. Download and open VMware software.

## 2.Create a new VM

Name it anything→click on next→Adjust the size of disk → change the option to first and then click on next.

Click on Finish to Launch .

### 3.VM is created

The screenshot displays the 'Virtual Machine Settings' window for a new Ubuntu VM. The left sidebar shows the 'Devices' list with the following specifications:

| Device           | Specification |
|------------------|---------------|
| Memory           | 4 GB          |
| Processors       | 2             |
| Hard Disk (SCSI) | 10 GB         |
| CD/DVD (SATA)    | Auto detect   |
| Network Adapter  | NAT           |
| USB Controller   | Present       |
| Sound Card       | Auto detect   |
| Printer          | Present       |
| Display          | Auto detect   |

The 'Description' section is empty, with a prompt to 'Type here to enter a description of this virtual machine.'

The 'Virtual Machine Details' section at the bottom provides the following information:

- State:** Powered off
- Configuration file:** C:\Users\G POOJITHA\Documents\Virtual Machines\Ubuntu (7)\Ubuntu (7).vmx
- Hardware compatibility:** Workstation 17.x virtual machine
- Primary IP address:** Network information is not available

### 4. Double-click on Hard disk and Click on add and create a new Hard disk

The screenshot shows the 'Add Hardware Wizard' dialog box in VMware Workstation. The 'Specify Disk Capacity' step is active, asking 'How large do you want this disk to be?'. The 'Maximum disk size (GB)' is set to 15.0, and the 'Recommended size for Ubuntu' is 20 GB. The 'Store virtual disk as a single file' option is selected.

The 'Virtual Machine Settings' window is visible in the background, showing the 'Hardware' tab with the following configuration:

| Device             | Summary                                                                             |
|--------------------|-------------------------------------------------------------------------------------|
| Memory             | 8 GB                                                                                |
| Processors         | 4                                                                                   |
| Hard Disk (SCSI)   | 15 GB                                                                               |
| Hard Disk 2 (SCSI) | 3 GB                                                                                |
| CD/DVD (SATA)      | Using file C:\Users\yashu\OneDrive\Documents\Virtual Machines\Ubuntu (3)\Ubuntu (3) |
| Network Adapter    | NAT                                                                                 |
| USB Controller     | Present                                                                             |
| Sound Card         | Auto detect                                                                         |
| Printer            | Present                                                                             |
| Display            | Auto detect                                                                         |

## 6. VM is created according to the conditions given.
